

Deliverable #1 Template : Software Requirement Specification (SRS)

SE 3A04: Software Design II – Large System Design

Tutorial Number: T03

Group Number: G8

Group Members: Hashim Bukhtiar, Jaden Moore, James Ariache, Olivia Reich, Omar Abdelhamid

- Group Member Name (as listed in Avenue)
- You do not need to use student #s or macid (keep those private).

IMPORTANT NOTES

- Be sure to include all sections of the template in your document regardless whether you have something to write for each or not
 - If you do not have anything to write in a section, indicate this by the *N/A*, *void*, *none*, etc.
- Uniquely number each of your requirements for easy identification and cross-referencing
- Highlight terms that are defined in Section 1.3 (**Definitions, Acronyms, and Abbreviations**) with **bold**, *italic* or underline
- For Deliverable 1, please highlight, in some fashion, all (you may have more than one) creative and innovative features. Your creative and innovative features will generally be described in Section 2.2 (**Product Functions**), but it will depend on the type of creative or innovative features you are including.

1 Introduction

- Provide an overview of the document/SRS.

1.1 Purpose

- Specify the purpose of the SRS.
- Specify the intended audience for the SRS.

1.2 Scope

- Identify the software product(s) to be produced, and name each (e.g., Host DBMS, Report Generator, etc.)
- Explain what the software product(s) will do (and, if necessary, also state what they will not do).
- Describe the application of the software being specified, including relevant benefits, objectives, and goals.

1.3 Definitions, Acronyms, and Abbreviations

- Provide the definitions of all terms, acronyms, and abbreviations required to properly interpret the SRS.
- This should be in alphabetical order.

1.4 References

- Provide a complete list of all documents referenced elsewhere in the SRS.
- Identify each document by title, report number (if applicable), date, and publishing organization.
- Specify the sources from which the references can be obtained.
- Order this list in some sensible manner (alphabetical by author, or something else that makes more sense).

1.5 Overview

- Describe what the remainder of the document/SRS contains.
(e.g. "Section 2 discusses...Section 3...")

2 Overall Product Description

- This section should describe the general factors that affect the product and its requirements.
- It does not state specific requirements.
- It provides a *background* for those requirements and makes them easier to understand.

2.1 Product Perspective

- Put the product into perspective with other related products, i.e., context
- If the product is independent and totally self-contained, it should be stated here
- If the SRS defines a product that is a component of a larger system, then this subsection should relate the requirements of that larger system to the functionality of the software being developed. Identify interfaces between that larger system and the software to be developed.
- A block diagram showing the major components of the larger system, interconnections, and external interfaces can be helpful

2.2 Product Functions

- Provide a *summary* of the major functions that the software will perform.
 - **Example:** An SRS for an accounting program may use this part to address customer account maintenance, customer statement, and invoice preparation without mentioning the vast amount of detail that each of those functions requires.
- Functions should be organized in a way that makes the list of functions understandable to the customer or to anyone else reading the document for the first time
- Present the functions in a list format - each item should be one function, with a brief description of it
- Textual or graphical methods can be used to show the different functions and their relationships
 - Such a diagram is not intended to show a design of a product, but simply shows the logical relationships among variables

2.3 User Characteristics

- Describe those general characteristics of the intended users of the product including educational level, experience, and technical expertise
- Since there will be many users, you may wish to divide into different user types or personas

2.4 Constraints

- Provide a general description of any constraints that will limit the developer's options

2.5 Assumptions and Dependencies

- List any assumptions you made in interpreting what the software being developed is aiming to achieve
- List any other assumptions you made that, if it fails to hold, could require you to change the requirements
 - **Example:** An assumption may be that a specific operating system will be available on the hardware designated for the software product. If, in fact, the operating system is not available, the SRS would then have to change accordingly.

2.6 Apportioning of Requirements

- Identify requirements that may be delayed until future versions of the system

3 Use Case Diagram

- Provide the use case diagram for the system being developed.
- You do not need to provide the textual description of any of the use cases here (these will be specified under "Highlights of Functional Requirements").

4 Highlights of Functional Requirements

- Specify all use cases (or other scenarios triggered by other events), organized by Business Event.
- For each Business Event, show the scenario from every Viewpoint. You should have the same set of Viewpoints across all Business Events. If a Viewpoint doesn't participate, write N/A so we know you considered it still. You can choose how to present this - keep in mind it should be easy to follow.
- At the end, combine them all into a Global Scenario.
- Your focus should be on what the system needs to do, not how to do it. Specify it in enough detail that it clearly specifies what needs to be accomplished, but not so detailed that you start programming or making design decisions.
- Keep the length of each use case (Global Scenario) manageable. If it's getting too long, split into sub-cases.
- You are *not* specifying a complete and consistent set of functional requirements here. (i.e. you are providing them in the form of use cases/global scenarios, not a refined list). For the purpose of this project, you do not need to reduce them to a list; the global scenarios format is all you need.
- Red text below is just to highlight where you need to insert a scenario - don't actually write it all in red.

Main Business Events: List out all the main business events you are presenting. If you sub-divided into smaller ones, you don't need to include the smaller ones in this list.

Viewpoints: List out all the viewpoints you will be considering.

Interpretation: Specify any liberties you took in interpreting business events, if necessary.

5 Non-Functional Requirements

- For each non-functional requirement, provide a justification/rationale for it.
Example:
SC1. *The device should not explode in a customer's pocket.*
Rationale: Other companies have had issues with the batteries they used in their phones randomly exploding [insert citation]. This causes a safety issue, as the phone is often carried in a person's hand or pocket.
- If you need to make a guess because you couldn't really talk to stakeholders, you can say "We imagined stakeholders would want...because..."
- Each requirement should have a unique label/number for it.
- In the list below, if a particular section doesn't apply, just write N/A so we know you considered it.

5.1 Look and Feel Requirements

5.1.1 Appearance Requirements

- LF-A1. The application must use company colours that align with the ones used in their branding.
Rationale: The user should feel as if the application is closely tied to the company that contracted us and their mission statements.
- LF-A2. The application should not use harsh and overly vibrant colours
Rationale: If the application is hard on the eyes to use, the user will have a worse experience overall and be adverse to using the application.
- LF-A3. The application should be consistent in how it associates colours with certain buttons or actions.
Rationale: When a user goes to do actions across the application, the colour of buttons relating to certain prompts like "yes" or "no" should remain consistent across all of those prompts. For example, if a "yes" button uses the colour green, then any other time "yes" comes up it should also be green.
- LF-A4. Users should be able to quickly distinguish what is and what is not a button.
Rationale: The user should be able to quickly understand the options available to them without needing a lot of effort or research.

5.1.2 Style Requirements

- LF-S1. The system must scale its UI so that it can fit to the size of the screen device.
Rationale: Device screens come in all shapes and sizes, thus the application should be able accommodate all kinds of screen sizes.
- LF-S2. Additional options or menus should be hidden under one to a small handful of dropdown menus.
Rationale: The user's screen should not be cluttered with an abundance of buttons that makes the application hard to navigate.

- LF-S3. On system startup, if the user is logged in, the system should display the frame that allows the user to identify a car.
Rationale: The system should display the frame that highlights its main functionality to communicate the intended purpose of the system.

5.2 Usability and Humanity Requirements

5.2.1 Ease of Use Requirements

- UH-EOU1. The system should only require a maximum of two inputs from the user to produce an output.
Rationale: The user should not need to go through an extensive process to identify a car. They should be able to take a picture, type in a model, etc. and receive the results they are looking for.
- UH-EOU2. The system should be usable with only one hand.
Rationale: There are many times in a user's daily life where only one hand is available to them. Thus, making the app usable with only one hand means users would be able to use the app even in those moments.

5.2.2 Personalization and Internationalization Requirements

- UH-PI1. The system should have a variety of language options to choose from.
Rationale: With a variety of users comes a variety of languages that are spoken. Thus, to improve the user's experience, we should give them a wide range of languages to choose from so they can use the app with the language they are most comfortable with.

5.2.3 Learning Requirements

- UH-L1. The system should require a user to know how to take a picture with their camera.
Rationale: Camera would be a form of input for the user so familiarity with using it is essential.
- UH-L2. The system should require a user to know how to use their phone keyboard.
Rationale: Another form of input for the user.

5.2.4 Understandability and Politeness Requirements

- UH-UP1. Any icons used in the system without explanation should be universally understood by users or easy to learn.
Rationale: An icon that can be quickly understood or universally known will make it easier for users to understand what our system does.

5.2.5 Accessibility Requirements

- UH-A1. The system should be able to accommodate users with colour blindness.
Rationale: All manners of users will be using this system, including those with colour blindness. Thus, it would be unethical if they were unable to use the app based on our design decisions.
- UH-A2. The system should be easy to use by both right and left handed people.
Rationale: A user should have an easy time using the system with either their left or right hand since the user may have a hand that they prefer to use. This requirement also works in conjunction with requirement UH-EOU2, the system should be usable with only one hand since the one hand being used should account for either the left hand or the right hand.
- UH-A3. The system should be compatible with accessibility screen readers.
Rationale: Users with vision or comprehension disabilities might use screen readers to better navigate the devices and applications that they are engaging with. Thus, to make the system

accessible to those users it would be necessary to make the system friendly to common screen readers.

5.3 Performance Requirements

5.3.1 Speed and Latency Requirements

PR-SL1.

5.3.2 Safety-Critical Requirements

PR-SC1.

5.3.3 Precision or Accuracy Requirements

PR-PA1.

5.3.4 Reliability and Availability Requirements

PR-RA1.

5.3.5 Robustness or Fault-Tolerance Requirements

PR-RFT1.

5.3.6 Capacity Requirements

PR-C1.

5.3.7 Scalability or Extensibility Requirements

PR-SE1.

5.3.8 Longevity Requirements

PR-L1.

5.4 Operational and Environmental Requirements

5.4.1 Expected Physical Environment

OE-EPE1.

5.4.2 Requirements for Interfacing with Adjacent Systems

OE-IA1.

5.4.3 Productization Requirements

OE-P1.

5.4.4 Release Requirements

OE-R1.

5.5 Maintainability and Support Requirements

5.5.1 Maintenance Requirements

MS-M1.

5.5.2 Supportability Requirements

MS-S1.

5.5.3 Adaptability Requirements

MS-A1.

5.6 Security Requirements

5.6.1 Access Requirements

SR-AC1.

5.6.2 Integrity Requirements

SR-INT1.

5.6.3 Privacy Requirements

SR-P1.

5.6.4 Audit Requirements

SR-AU1.

5.6.5 Immunity Requirements

SR-IM1.

5.7 Cultural and Political Requirements

5.7.1 Cultural Requirements

CP-C1.

5.7.2 Political Requirements

CP-P1.

5.8 Legal Requirements

5.8.1 Compliance Requirements

LR-COMP1.

5.8.2 Standards Requirements

LR-STD1.

A Division of Labour

Include a Division of Labour sheet which indicates the contributions of each team member. This sheet must be signed by all team members.
